FAREPORTALSM TECHNOLOGY

Travel Technology Solutions for Today's Professional

Fareportal Travel Solutions are a suite of products based on extensive feedback from the travel professional community. They are built from the ground up to provide ease of use, combined with the most comprehensive system of data collection, management and distribution ever offered. Based on the latest .NET technology platform, they have the ability to combine travel data from multiple sources, and present it in a simple to use interface, ready to sell to your clients.

Fareportal goes beyond the one-size-fits-all approach, offering different products, each one uniquely suited to a specific segment of the industry. Following is a product guide to the three online booking engines offered.

Consolidators

The Consolidator Booking Engine offers a complete system of storing complicated non-published fares in a proprietary database, with complete management and booking capability. It includes multi-city and multiple stopover pricing and booking capability. It handles the entire process, from contract management to file finishing, with multi-GDS connectivity.

Corporate Accounts

The Corporate Booking Module combines Private and Published fares, with single-screen access to Consolidator fares, and Web fares from over 30 airline and discount airfare websites. It includes full support for Profile management; real time Reports; and Travel Policy compliance. It is designed to bring control back to corporate travel management, and enhance your brand with the included traveler and travel arranger self-booking tool interface which you can give to your clients. It is designed with both the Corporate Travel Agency in mind, as well as the needs of the corporate traveler.

FAREPORTALSM TECHNOLOGY

Advanced Booking System

This flagship product includes powerful Portal capabilities and is designed for travel companies who wish to combine existing data sources with multiple external sources and offer it to different sets of clients. Based on the available components selected, the system can be completely customized for different markets, each having a different interface, features, fares and markups. It utilizes cutting edge multi-threading technology and presents fully sorted and filtered fares from all sources on a single screen.
